LibreOffice Notes

Default "Standard" UI uses toolbars and shows the Spell Check icon.
Optional "Tabbed" UI uses a Word-like ribbon, which does not show the Spell Check icon? Can: -
   a) Press Shift+F7 to toggle Automatic spell checking On or Off.
   b) Press F7 to invoke a manual spell check, or
   c) Click on 'Review' tab then 'Spell Check' icon.

Toolbar 'Icon Style' default is 'Automatic (Colibre)'. 'Karasa Jaga (SVG)' is better but irrelevant
since using the 'Tabbed' UI instead.

Document background colour: -
(Change it in one app and it applies to all LibreOffice apps.)
Default RGB = 255 255 255
Customised = 200 210 200

Calc: -
Grid lines colour set to 'Light Grey 2'

Redacting ▇ documents: -
   1) Open ▇ document containing underlined ▇ in Writer then select Tools>Auto-Redact.
   2) Select the target ▇ then click on OK, which launches the Draw module.
   3) It is at this point that a preview of the redacted ▇ appears but there is an unwanted effect as
       well in that any underlined ▇ in the original ▇ document becomes highlighted.
   4) To create the finished pdf click the 'Redacted Export (Black)' icon on the Redaction toolbar
       and then choose where to save the pdf file.

Unable to stop underlined ▇ being highlighted so not ideal.
